

ATTENTION

Stratus portable receivers may require a firmware update before they can function while connected to Stratus ESG.

To check the firmware version currently installed on a Stratus portable receiver:

1. Connect an iOS device to the Stratus Wi-Fi network.
2. Open ForeFlight Mobile.
3. Open the Stratus Status page. The firmware currently running on the Stratus portable receiver is shown in the “Firmware” field.

If the firmware is older than the versions listed below, update the firmware.

- Stratus 2S: Version 1.1
- Stratus 1S: Version 1.1
- Stratus 2: Version 2.1

To update firmware:

IMPORTANT: The iOS device must be connected to the internet, not the Stratus portable receiver’s wireless network, until Step 6.

1. Open the App Store on an iOS device.
2. Search “Stratus Updater.”
3. The Stratus Updater app will be the first search result. Download it to the iOS device.
4. Open the Stratus Updater app.
5. Tap the **Download** button at the top to download the latest firmware.
6. When the firmware download is complete, turn on the Stratus portable receiver and connect the iOS device to the Stratus wireless network from the iOS device’s **Settings** page.
7. Re-open the Stratus Updater app and tap **Program Page** at the bottom of the screen.
8. Tap **Program**. The Stratus portable receiver’s yellow LEDs will flash while the firmware update is being applied. When the Stratus portable receiver powers off, the firmware is installed.
